

Muhammad Muaz Arif

DevOps Engineer

Karachi, Pakistan | +92 347 498 8684 | maaz.arif12@gmail.com | github.com/muazarif12

DevOps Engineer who built a startup's entire GCP platform from scratch: networking, Terraform-managed databases, CI/CD, load balancing, IAM and alerting.

Technical Skills

Cloud (GCP): VPC, Cloud NAT, Cloud Router, Compute Engine, Cloud Run, Cloud Load Balancing, Cloud Build, Artifact Registry, Cloud Storage, IAM, Cloud Monitoring

DevOps & IaC: Terraform, CI/CD, ArgoCD, GitOps, Docker

Databases: YugabyteDB (YSQL)

Languages & Tools: Python, Bash, Linux, Git

Professional Experience

CodetAI

DevOps Engineer

Karachi, Pakistan

Nov 2025 - Present

- Designed and built the company's GCP network from scratch: a custom VPC with manually defined subnets, plus Cloud NAT and Cloud Router so private VMs can reach the internet without public IPs.
- Provisioned a YugabyteDB cluster (master and tserver nodes) on Compute Engine using Terraform, with VPC firewall rules restricting database access.
- Built CI/CD pipelines in Cloud Build for the frontend and backend Cloud Run services. Each push runs automated tests, builds and stores container images in Artifact Registry, and deploys a new revision.
- Set up a global HTTPS load balancer with serverless NEG's, putting both Cloud Run services behind the company's custom domain.
- Implemented automated database backups (logical dumps) to Cloud Storage.
- Managed access control with GCP IAM, using conditional role bindings to follow least privilege.
- Set up Cloud Monitoring alert policies on database VMs for CPU, memory and disk usage.
- Administered YugabyteDB: configured the YSQL Connection Manager (logical vs. physical connection pooling), managed roles and superuser access, and troubleshooted using database logs and Linux tooling.

Systems Limited

DevOps Engineer Intern

Karachi, Pakistan

Sep 2025 - Oct 2025

- Gained hands-on experience with CI/CD pipelines with Tekton on Red Hat OpenShift (Kubernetes), automating packaging and deployment of Temenos component updates across multiple environments.
- Gained hands-on experience with GitOps continuous delivery with ArgoCD and Git.

Projects

DevSecOps CI/CD Pipeline -- Netflix Clone

Jenkins, Docker, SonarQube, AWS EC2

- Built a Jenkins CI/CD pipeline to build, scan, and deploy a Netflix clone to AWS EC2.
- Containerized the application with Docker for consistent, reproducible deployments.
- Integrated SonarQube quality gates to catch bugs and code smells before deployment.
- Set up Prometheus and Grafana to monitor application health and performance.

Real-Time Log Analysis with ELK Stack

Elasticsearch, Logstash, Kibana

- Deployed an ELK stack to centralize, parse, and index application logs.
- Built Kibana dashboards showing log trends, system metrics, and errors in real time.
- Showed how centralized logging speeds up troubleshooting and improves observability.

Education

Institute of Business Administration (IBA)

Bachelor of Science in Computer Science

Karachi, Pakistan

Aug 2021 - Jun 2025

Certifications

Google Cloud Computing Foundations: Infrastructure in Google Cloud - Google Cloud

Google Cloud Computing Foundations: Cloud Computing Fundamentals - Google Cloud
