TECHNICAL SKILLS

- **Cloud Platforms:** Google Cloud Platform (GKE, IAM, Filestore, Pub/Sub, Cloud Run)
- **Containerization & Orchestration:** Docker, Kubernetes (GKE)
- **Infrastructure as Code:** Terraform
- **CI/CD & Automation:** Google Cloud Build, Jenkins, ArgoCD (GitOps), Bash scripting
- **Monitoring & Observability:** Prometheus, Grafana
- **Databases:** YugabyteDB (PostgreSQL-compatible)
- **Security:** GKE Workload Identity, Network Policies, GCP IAM (least-privilege)
- **Languages:** Python, Bash, YAML

PROFESSIONAL EXPERIENCE

- **CodetAI** Karachi, Pakistan
DevOps Engineer November 2025 – Present
 - Designed and maintained CI/CD pipelines using Google Cloud Build to automate build, test, and deployment workflows across GCP services, reducing manual deployment steps.
 - Provisioned and managed all cloud infrastructure with Terraform, ensuring reproducible, version-controlled environments across GKE and supporting GCP services.
 - Deployed and operated YugabyteDB (PostgreSQL-compatible) on GKE within a secure VPC, and performed query-level performance analysis
 - Architected a production-grade sandboxed JavaScript execution platform on Kubernetes to safely run untrusted AI agent code, using a three-tier design with a stateless router and StatefulSet executors — a critical security requirement for the company's AI workflow engine.
 - Secured the Kubernetes environment using GKE Workload Identity, custom Network Policies, PodDisruptionBudgets, and restricted ingress controls to enforce least-privilege access.
 - Configured Prometheus and Grafana for infrastructure and application monitoring, including alerting rules, Alertmanager integration, and production dashboards for GKE workloads and YugabyteDB.
 - Integrated Cloud Run services with YugabyteDB and configured GCP IAM roles and service accounts to enforce least-privilege access across all platform components.
- **Systems Limited** Karachi, Pakistan
DevOps Engineer Intern September 2025 – October 2025
 - Built and maintained CI/CD pipelines on Tekton within the Red Hat OpenShift Container Platform, automating packaging and deployment of Temenos component updates across multiple environments.
 - Implemented GitOps-based continuous delivery using ArgoCD, enabling version-controlled, automated application deployments with full audit trails.

PROJECTS

- **DevSecOps CI/CD Pipeline – Netflix Clone (AWS EC2 + Jenkins + Docker):**
 - Deployed a containerized web application via a secure Jenkins CI/CD pipeline on AWS EC2, integrating Docker for container builds and Prometheus + Grafana for end-to-end monitoring of application health and performance metrics.
 - Integrated SonarQube for automated static code quality analysis directly within the Jenkins pipeline, enforcing quality gates before deployment.
- **Real-Time Log Analysis with ELK Stack:**
 - Deployed an ELK stack (Elasticsearch, Logstash, Kibana) to aggregate and parse logs from a sample application, demonstrating centralized logging for production observability.
 - Built Kibana dashboards to visualize log trends, system metrics, and application errors in real time, enabling rapid root-cause analysis.
- **VidSense – AI Video Intelligence Platform (Final Year Project):**
 - Built a full-stack video intelligence platform with a FastAPI (Python) backend and React frontend, integrating Faster-Whisper and hybrid retrieval for semantic search over video content.
 - Implemented automated generation of flashcards, study guides, and AI-enhanced podcasts from video content, demonstrating end-to-end Python backend development.

EDUCATION

- **Institute of Business Administration (IBA)** Karachi, Pakistan
B.S. Computer Science August 2021 – June 2025

CERTIFICATIONS & COURSES

- **Google Cloud Computing Foundations: Infrastructure in Google Cloud**
- **Google Cloud Computing Foundations: Cloud Computing Fundamentals**
